

Unity's Input System (NEW)

Go to :- Package Manager → Unity Registry
Click "Yes" ← Install Input System

Create Input Actions

We have 3 things :-

<u>Action Map</u>	<u>Actions</u>	<u>Properties</u>
On Foot	Movement	
	↓ WASD	
	Up	→ W
	Down	→ S
	Left	→ A
	Right	→ D
	Jump	
	↑ Space	→ SPACE

Let say we have

ActionMap \rightarrow OnFoot

Under its Actions, we could have every action player can do while it is walking around on ground.

For OnFoot, we have Action called Movement

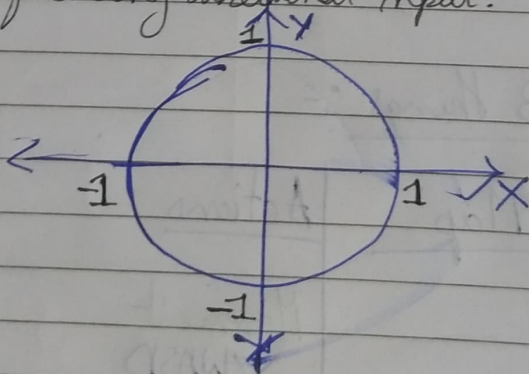

Every action can have multiple bindings

⊗

2D Vector Composite:-

This binding will return a Vector2 \rightarrow between -1 and 1
This is good for any directional input.

#

But, in newer version of Unity, #2D Vector Composite has been changed.

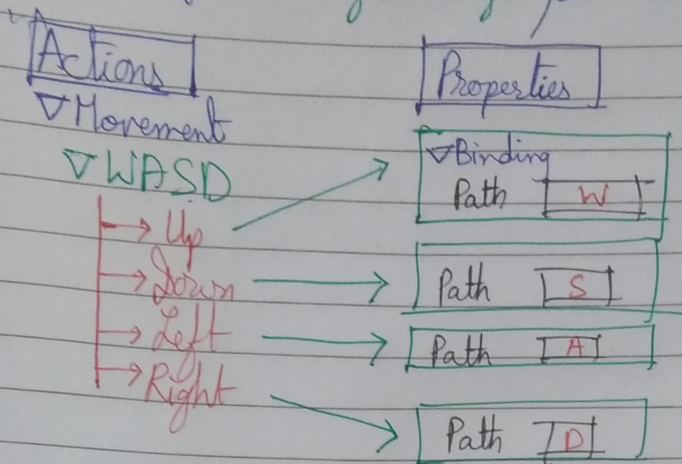

In Properties Tab, (Action Properties)

- Change 'Action Type' \rightarrow 'Value'
- Change 'Control Type' \rightarrow 'Vector 2'

Then:-

- Right Click on 'Movement' Action
- Select 'Up/Down/Left/Right' Composite

WASD
Now, we will set up the "Key Bindings" for Movement

When you click on Path

Type W, A, S, D respectively
[Keyboard]

(∵ we are setting up keyboard binding)

Jump
Now, we will set up the "Key Bindings" for Jump

Now, click on Save Asset

Then, in the Inspector window
